THE FUNCTIONS $E_n(x) = \int_1^{\infty} e^{-xu} u^{-n} du$

by

G. Placzek

Appendix A, by Dr. G. Blanch; An Asymptotic Expansion
for $E_n(x)$.

Appendix B: Table of the Functions $E_n(x)$, prepared by
the Mathematical Tables Project,
150 Nassau Street, New York, N.Y.

Summary

The functions $E_n(x)$ occur frequently in diffusion theory. This report gives a collection of formulae and expansions for the functions and their Fourier and Laplace transforms. A new expansion for $E_n(x)$, by Dr. G. Blanch, useful for $x+n \gg 1$, is given in Appendix A. Appendix B contains a table of $E_n(x)$, for integral values of n up to 20, at intervals .01 for $0 \leq x \leq 2$ and .1 for $2 \leq x \leq 10$. The recurrence relations between the functions E_n make interpolation relatively simple.

2069646

The functions $E_n(x) = \int_0^\infty e^{-xu} u^{-n} du$ play an important role in diffusion theory. The discussion of certain integral equations can be simplified by their use; expansions in terms of these functions are also often found convenient for the numerical evaluation of integrals occurring in connection with transport problems. The functions have been defined by Schloemilch⁽¹⁾, and have been extensively used by Schwarzschild⁽²⁾, Eddington⁽³⁾, Hopf⁽⁴⁾ and others. In spite of this, no systematic effort for their tabulation seems to have been made so far. A recent attempt, by Mian and Chapman⁽⁵⁾, to approximate the functions by "index sums" is not accurate enough for our purposes.

In the following, we give a few useful formulae for the functions $E_n(x)$ and their Fourier and Laplace transforms. Since most applications deal with positive integral values of n and real x , we restrict ourselves in the following to this case, although most of the relations given have a wider range of validity.

Appendix A, by Dr. G. Blanch, gives a new and very useful asymptotic expansion for $E_n(x)$, which makes tabulation of the functions for large x almost unnecessary. Appendix B contains tables of $E_n(x)$, prepared by the Mathematical Tables Project, for values of n up to 20, at intervals .01 for $0 \leq x \leq 2$ and at intervals .1 for $2 < x \leq 10$.

THE FUNCTIONS $E_n(x)$ FOR REAL POSITIVE ARGUMENT AND POSITIVE INTEGRAL n .

1) Definition:

$$E_n(x) = \int_1^{\infty} e^{-xu} u^{-n} du = \int_0^1 \mu^{n-2} e^{-x/\mu} d\mu \quad (1)$$

in particular:

$$E_0(x) = \frac{e^{-x}}{x} \quad (1a)$$

$$E_1(x) = -\text{Si}(-x) = \int_x^{\infty} e^{-u} \frac{du}{u} \quad (1b)$$

$$E_n(x) = Q_n(x) e^{-x} + \frac{(-x)^{n-1}}{(n-1)!} E_1(x), \quad n > 1 \quad (1c)$$

with

$$Q_n(x) = \frac{1}{(n-1)!} \sum_{m=0}^{n-2} (n-m-2)! (-x)^m \quad (1d)$$

2) Recurrence Relations:

$$E_n(x) = \int_x^{\infty} E_{n-1}(x') dx' \quad (2)$$

$$E'_n(x) = -E_{n-1}(x) \quad (3)$$

$$E_n(x) = \frac{1}{n-1} \left\{ e^{-x} - x E_{n-1}(x) \right\}, \quad n > 1 \quad (4)$$

3) Expansions:

(a) The following expansion is equivalent to the definition (1):

$$E_n(x) = \sum_{\substack{m=0 \\ m \neq n-1}}^{\infty} \frac{(-x)^m}{(n-1-m) \cdot m!} + (-1)^n \frac{x^{n-1}}{(n-1)!} \left\{ \gamma + \log x - A_n \right\}, \quad n > 0$$

$$\gamma = .577216 \quad A_1 = 0, \quad A_n = \sum_{m=1}^{n-1} \frac{1}{m}, \quad n > 1, \quad (5)$$

(b) Asymptotic Expansion ($x \gg 1$):

$$E_n(x) = \frac{e^{-x}}{x} \left\{ 1 - \frac{n}{x} + \frac{n(n+1)}{x^2} - \frac{n(n+1)(n+2)}{x^3} + \dots \right\}, \quad n > 0 \quad (6)$$

4) Fourier Transforms:

(a) Definition and Recurrence Relations.

$$f_n(y) = \int_0^\infty E_n(x) \cos xy dx = \frac{1}{y^n} \int_0^y \frac{u^{n-1}}{1+u^2} du \quad (7)$$

$$g_n(y) = \int_0^\infty E_n(x) \sin xy dx = \frac{1}{y^n} \int_0^y \frac{u^n}{1+u^2} du \quad (8)$$

$$f_n(y) = \frac{g_{n-1}(y)}{y} \quad (9)$$

$$f_{n+2} = \frac{1}{y^2} \left\{ \frac{1}{n} - f_n \right\} \quad (10a)$$

$$g_{n+2} = \frac{1}{y} \left\{ \frac{1}{n+1} - \frac{g_n}{y} \right\} \quad (10b)$$

(b) Explicit Expressions:

$$g_{2m}(y) = (-1)^m \frac{\tan^{-1} y}{y^{2m}} + \frac{1}{(2m-1)y} - \frac{1}{(2m-3)y^3} + \frac{1}{(2m-5)y^5} - \dots + \frac{(-1)^{m-1}}{y^{2m-1}} \quad (11a)$$

$$g_{2m+1} = \frac{1}{2} \left\{ \frac{(-1)^m \log(1+y^2)}{y^{2m+1}} + \frac{1}{my} - \frac{1}{(m-1)y^3} + \frac{1}{(m-2)y^5} - \dots + \frac{(-1)^{m-1}}{y^{2m-1}} \right\} \quad (11b)$$

In particular

n	f_n	g_n
0	diverges	$\tan^{-1}y$
1	$\frac{\tan^{-1}y}{y}$	$\frac{1}{2y} \log(1+y^2)$
2	$\frac{1}{2y^2} \log(1+y^2)$	$\frac{1}{y} \left\{ 1 - \frac{\tan^{-1}y}{y} \right\}$
3	$\frac{1}{y^2} \left\{ 1 - \frac{\tan^{-1}y}{y} \right\}$	$\frac{1}{2y} \left\{ 1 - \frac{\log(1+y^2)}{y^2} \right\}$
4	$\frac{1}{2y^2} \left\{ 1 - \frac{\log(1+y^2)}{y^2} \right\}$	$\frac{1}{y} \left\{ \frac{1}{3} - \frac{1}{y^2} + \frac{\tan^{-1}y}{y^3} \right\}$
etc.		

(c) Expansions

$$f_n(y) = \sum_{m=0}^{\infty} \frac{(-1)^m y^{2m}}{n+2m} \quad (12a)$$

$$g_n(y) = \sum_{m=0}^{\infty} \frac{(-1)^m y^{2m+1}}{n+2m+1} \quad (12b)$$

5) Laplace Transforms:

(a) Definition and Recurrence Relation

$$\phi_n(s) = \int_0^\infty E_n(x) e^{-sx} dx = \int_0^1 \frac{\mu^{n-1}}{1+s\mu} d\mu \quad (13)$$

$$s\phi_n(s) = \frac{1}{n-1} - \phi_{n-1}(s) \quad (14)$$

(b) Explicit Expressions:

$$\phi_n(s) = \frac{1}{s} \left\{ \frac{1}{n-1} - \frac{1}{(n-2)s} + \frac{1}{(n-3)s^2} - \dots + (-1)^n \frac{\left(1 - \frac{1}{s} \log(1+s)\right)}{s^{n-2}} \right\}_{n>1} \quad (15)$$

ϕ_0 diverges

$$\phi_1 = \frac{1}{s} \log(1+s) \quad (16)$$

$$\phi_2 = \frac{1}{s} \left\{ 1 - \frac{1}{s} \log(1+s) \right\}$$

etc.

(c) Expansion:

$$\phi_n(s) = \sum_{m=0}^{\infty} \frac{(-s)^m}{n+m} \quad (17)$$

6) Inequalities:

$$E_n(x) < \frac{n}{n-1} E_{n+1}(x), \quad n > 1 \quad (18)$$

$$\frac{e^{-x}}{x+n} < E_n(x) < \frac{e^{-x}}{x+n-1}, \quad n \geq 1 \quad (19)$$

$$E_n^2(x) < E_{n-1}(x) E_{n+1}(x) \quad (20)$$

$$\frac{d}{dx} \left(\frac{E_{n+1}(x)}{E_n(x)} \right) > 0 \quad (21)$$

$$\frac{d}{dx} \frac{E_n(x-a)}{E_n(x)} < 0, \quad 0 < a < x \quad (22)$$

7) Proofs and Remarks.

The recurrence relations (2) and (3) follow immediately from the definition (1). Integrating (3) by parts one obtains (4). Repeated application of (4) yields (1c) and (1d). The expansion (5) follows from the well known expansion for E_1 by integrating it $n-1$ times and using (2) in the form

$$E_n(x) = \frac{1}{n-1} - \int_0^x E_{n-1}(x') dx', \quad n > 1 \quad (2a)$$

(2a) follows from (2) by noting that, according to (4), we have, for $n > 1$

$$\int_0^x E_{n-1}(x') dx' = E_n(0) = \frac{1}{n-1} \quad (4a)$$

Similarly (6) follows from the well known asymptotic expansion for E_1 by repeated application of (4).

The expressions for the Fourier and Laplace transforms can be obtained by straightforward integration. The recurrence relations (9), (10) and (14) can also be immediately deduced by translating (2), (3) into Fourier space. It may also be noted that the expansions (17) or (12) give directly the moments of E_n :

$$\int_0^\infty x^m E_n(x) dx = \frac{m!}{n+m}, \quad m \geq 0 \quad \text{for } n > 0; \quad m \geq 1 \quad \text{for } n = 0 \quad (23)$$

The inequalities (18) - (22) have been derived by Hopf⁽⁴⁾.

An extensive discussion of various integrals containing E_1 has been given by Nielsen⁽⁶⁾. In many cases, the corresponding results for E_n can be deduced with the help of the recurrence relations.

(6) Theorie des Integrallogarithmus, Leipzig, 1906.

APPENDIX A.

$$\text{An Asymptotic Expansion for } E_n(x) = \int_1^\infty (e^{-xu}/u^n) du.$$

by G. Blanch, Mathematical Tables Project.

We may write

$$E_n(x) = \int_1^\infty e^{-(xu+n \log u)} du = \int_1^\infty e^{-G} du, \quad (\text{A1})$$

where

$$G = xu + n \log u, \text{ and } \frac{dG}{du} = (xu + n)/u.$$

Integrating by parts,

$$E_n(x) = - \left[e^{-G} u/(xu+n) \right]_1^\infty + \int_1^\infty n \left\{ e^{-G} / (xu+n)^2 \right\} du \quad (\text{A2})$$

Repeating the process three times, and substituting limits of integration, we have

$$E_n(x) = \frac{e^{-x}}{x+n} \left[1 + \frac{n}{(x+n)^2} + \frac{n(n-2x)}{(x+n)^4} + \frac{n(6x^2-8nx+n^2)}{(x+n)^6} \right] + R(n,x) \quad (\text{A3})$$

where

$$R(x,n) = n \int_1^\infty \frac{e^{-xu} (-24x^3u^3 + 58n x^2u^2 - 22n^2xu + n^3)}{u^n (xu+n)^8} du$$

APPENDIX B.

Table of the Functions $E_n(x)$.

Prepared by the Mathematical Tables Project.

The table gives the values of $E_n(x)$ for $n=0, 1, 2, \dots, 20$ at intervals .01 for $x \leq 2$ and at intervals .1 for $2 < x \leq 10$.

INTERPOLATION:

In addition, values of $E_2(x) = x \log_e x$ and $E_3(x) + \frac{1}{2} x^2 \log_e x$ are tabulated for $x \leq 0.1$.

In the region where x is larger than 2, the figures in parentheses denote the power of ten by which entries alongside and below in the same column should be multiplied. For example: Corresponding to $x = 3.5$, $E_{10}(x) = 0.00236120$.

It should be noted that interpolation is made particularly simple by the fact that the derivatives of E_n are given by the functions E_n of lower order. For from (3),

$$\frac{d}{dx^r} E_n(x) = (-1)^r E_{n-r}(x)$$

Thus by Taylor's expansion

$$E_n(x+t) = E_n(x) - t E_{n-1}(x) + \frac{t^2}{2} E_{n-2}(x) - \frac{t^3}{6} E_{n-3}(x) + \dots$$

For $n \geq 4$, it is enough to stop with E_{n-3} , provided t is allowed to take on negative as well as positive values and x is so chosen that $|t|$ is no greater than $0.5h$, where h is the interval in the argument. For $x < 2$, one may drop the term involving $E_{n-3}(x)$.

For $n=3$ or 2 and $x < .10$, it is necessary to interpolate in the auxiliary functions $E_3(x) + \frac{1}{2} x^2 \log_e x$, or in $E_2(x) = x \log_e x$; linear interpolation in these auxiliary functions will be correct to within a unit in the fifth decimal place; 3-point interpolation will yield 7 decimal places. For $x > .10$ and $n=3$, formula (4) may be used.

If $n = 2$ and x is close to 0.10, linear interpolation will be in error by about a unit in the fourth decimal place; 3-point interpolation will be correct to five decimals, and 5-point interpolation will yield seven places. Interpolation becomes progressively easier as x increases; thus near $x = 0.5$, linear interpolation is correct to within 2×10^{-5} , and 3-point interpolation is correct to within 3×10^{-7} . When the interval in x is 0.1 (for x greater than 2), linear interpolation in $E_2(x)$ yields 3 significant figures, and four-point interpolation is correct to within 3 units in the sixth significant figure.

Since $E_1(x)$ is tabulated more extensively elsewhere, interpolation for $E_1(x)$ in this table need not be considered. Similarly $E_0(x)$ may be very simply computed directly with the aid of a table of e^{-x} , e.g., Tables of the Exponential Function, Federal Work Agency, Work Projects Administration for the City of New York.
