PREPARED FOR C.S.A. Committee on Gas Burning Appliances and Equipment

DATE December 1957

SUBJECT

Comments on A.S.A. Z21.5 - 1956 and Z21.5a - 1957

Approval Requirements for Domestic Gas Clothes Dryers;

and A.S.A. Z21.19 - 1941: Approval Requirements

for Refrigerators Using Gas Fuel.

The above A.S.A. specifications have been reviewed as a basis for the preparation of corresponding CSA specifications. All references to American Standards are listed below, with information on existing Canadian Standards where these exist. Reference is made also to items which are potentially in conflict with existing Canadian codes such as the National Building Code, 1953. All specified temperatures are listed as a convenience in further consideration of these specifications.

These references will presumably be changed to the corresponding C.S.A. Standards when they are completed.

Miscellaneous

1. Sheet metal gauges

In the above standard sheet metal thicknesses are given in gauges. There is no Canadian Standard on sheet metal gauges, although at present C.G.S.B. is working on gauging. The National Building Code, 1953 refers to U.S. Standard gauge.

A.S.A. Z21.5 - 1956 and Z21.5a - 1957 (contd.)

2. Pipe sizes

Nominal pipe sizes are presumably in accordance with A.S.A. B36.10 - 1950 (no C.S.A. Standard).

Pipe threads are presumably in accordance with A.S.A. B2.1 - 1945 (no C.S.A. Standard).

3. Wire screen

Page Paragraph

6 1.15.3 No. 40 mesh brass, aluminum or equivalent.

This is equivalent to 420 microns mesh as specified in C.G.S.B. 8-GP-1a.

4. Test gases

Are Canadian test gases the same?

5. Definitions

Heating value (total) - higher calorific value. Others refer to lower calorific value.

6. Temperatures

These references will presumably be brought up to date in the revised Z21.19 and should be changed to the corresponding C.S.A. Standards when they are completed.

A.S.A. Z21.19 - 1941

Agreement with National Building Code, 1953

There appears to be general agreement between the above two works and the National Building Code.

The N.B.C. does not detail metal composition, sheet thicknesses and temperatures as do the American Standards.
